

# CARTETHYIA: Master System & Game Design Document

## 1. Project Overview

### 1.1 What is Cartethyia?

Cartethyia is a premium, highly polished Discord bot that merges deep, anime-themed social interactions with a fully-fledged, Wuthering Waves-inspired Turn-Based Action RPG. It exists directly inside Discord, utilizing high-quality embeds, dynamic Canvas-generated images, and interactive UI buttons.

### 1.2 Why does it exist? (The Core Philosophy)

Most Discord bots fall into two distinct categories:

1. Social bots with static, boring GIF commands.
2. RPG bots that are so isolated from the chat that they feel like a single-player spreadsheet.

Cartethyia solves this by bridging the gap. **In Cartethyia, socializing is the primary resource generator.** You cannot reach the endgame without interacting with your community. It is designed to boost server activity, encourage chatting, and provide a brutally rewarding endgame grind.

### 1.3 Where does it live?

Cartethyia operates entirely via Discord Slash Commands ( / ), Context Menus (Right-Click -> Apps), and interactive Message Components (Buttons/Select Menus).

## 2. The Vibe Engine (Core Social Mechanics)

The foundation of Cartethyia is its massive library of high-quality, credited anime GIFs.

### 2.1 The Interaction Matrix

Commands are broken into categories. Each category has a specific influence on the RPG mechanics:

- **Physical** ( /interact kiss, hug, slap, bite ): Target required.
  - *RPG Effect:* High chance to drop Echo Upgrade Materials.
- **Expressive** ( /action dance, cry, smug, sleep ): Self-targeted.
  - *RPG Effect:* High chance to drop standard currency (Credits).
- **Emotional** ( /react angry, happy, cringe ): Reactionary.
  - *RPG Effect:* Grants minor Chat EXP.
- **Relational** ( /bond marry, adopt, nuzzle ): Builds the server's Family Tree.
  - *RPG Effect:* Significantly boosts "Synchrony Affinity" between users.

## 2.2 Contextual Action Chains

When User A uses `/interact pat` on User B, the embed contains a **"Return Pat"** button. If User B clicks it, the bot does not send a new message. Instead, it seamlessly *edits* the original message to: *"User B purrs and pats User A back!"* \* **The Incentive:** Returning an interaction grants a **2x Loot Multiplier** to both users, strongly encouraging people to reply to one another.

## 2.3 Synchrony Affinity (The Bond Level)

Every time two users interact, their hidden Affinity level increases.

- If two users with high Affinity enter a Co-op Boss Fight together, they gain the **Synchrony Aura** (+10% Max HP, +15% Damage).
- This literally translates friendship into combat power.

## 3. Character Progression & World Level

Players begin as a blank-slate "Drifter" with a rusted weapon.

### 3.1 Chat-to-Level System

- Every organic message sent in the server grants **Resonance EXP** (1-minute cooldown to prevent spam).
- Users can also consume **Resonance Records** (items) to instantly grant EXP.

### 3.2 The World Level (WL) Gate

Character levels are strictly capped by the current World Level (WL).

- **WL 0:** Level Cap 20.
- **WL 1:** Level Cap 40.
- **WL 2:** Level Cap 60... up to WL 8 (Level 90).

### 3.3 Ascension Quests (The Skill Check)

To increase the World Level and break the level cap, a user must initiate an **Ascension**. This is a brutally difficult, solo-only boss fight. If their Echoes and Weapons are not upgraded, they will fail.

- *Reward:* Higher World Levels permanently increase the drop rates of rare materials and eliminate low-rarity Echo drops.

## 4. The Arsenal: Weapons & Elements

At Level 20 (WL 1), players unlock their combat identity.

### 4.1 Elemental Resonances

Players choose an element, which dictates their Resonance Skill and passive buffs:

-  **Fusion:** +15% Crit Rate. Focuses on burst damage and burning DoT (Damage over Time).
-  **Glacio:** +20% Defense. Focuses on crowd control, delaying boss turns, and shielding.

- ⚡ **Electro:** +20% Energy Regen. Focuses on attacking multiple times and rapid Ultimate usage.
- 🍷 **Aero:** +15% Speed. Focuses on manipulating the turn order and evading attacks.
- 🟣 **Havoc:** +15% Lifesteal. Focuses on solo survivability and sacrificing HP for massive damage.
- ✨ **Spectro:** +25% Healing Bonus. The ultimate Co-op support element.

## 4.2 Weapon Forging

Players craft and equip weapons using **Forging Ores**. The weapon determines the basic attack style:

- **Broadblade:** Slow, massive base damage.
- **Sword:** Balanced stats, medium speed.
- **Pistols:** Low base damage, but hits 3-4 times per turn (great for Crit builds).
- **Rectifier:** Converts all basic attacks into Elemental Damage.

## 5. The Echo System (Endgame Gear)

Echoes are the artifacts/gear of Cartethyia. A player equips 5 Echoes in their "Resonance Grid" (1 Main, 4 Subs).

### 5.1 Echo Anatomy

- **Rarity:** 1-Star (Green) to 5-Star (Gold).
- **Main Stat:** Depends on the Echo's cost. (e.g., Only large Boss Echoes can roll Crit Rate as a main stat).
- **Substats:** 5 slots. Unlocked at levels 5, 10, 15, 20, and 25.
- **The Ultimate:** The Echo equipped in **Slot 1** dictates the player's Ultimate Ability. (e.g., Equipping the *Inferno Rider* Echo allows you to summon it in combat for massive Fusion damage).

### 5.2 The Paradox Engine (Brutal Rerolling)

This is the true endgame. Getting a 5-Star Echo is easy; getting perfect substats is agonizingly hard.

1. **Leveling:** Use *Tuning Modules* to level the Echo to 25.
2. **Revealing:** Use *Sealing Tubes* to reveal the 5 hidden substats (RNG).
3. **Rerolling:** If the stats are bad, the player must consume a **Paradox Core** (an extremely rare boss drop). Consuming one rerolls *all* substats simultaneously.
4. **Locking (Stasis):** If a player rolls a perfect Crit DMG% stat, they can consume a **Stasis Lock**. This freezes that specific line. When they use their next Paradox Core, only the remaining 4 stats reroll. The cost of Stasis Locks increases exponentially per stat locked.

## 6. The Combat System (Turn-Based Resonance)

Combat is strictly turn-based, utilizing Discord UI buttons and dynamic embed updates. It is designed to be strategic, allowing players time to think without fighting API lag.

### 6.1 The Turn Order & UI

- Turn order is determined by the player/boss **Speed** stat.
- When it is a player's turn, they are presented with 4 buttons:
  - [Basic Attack]
  - [Resonance Skill] (Has a turn cooldown)
  - [Echo Ultimate] (Requires 100 Energy, gained by attacking/taking damage)
  - [Flee / Defend]

## 6.2 The Stagger System (Vibration Bar)

Bosses have a white "Vibration Bar" beneath their HP.

- Attacking the boss, especially with its Elemental Weakness, chips away at the bar.
- **Shatter State:** When the bar breaks, the boss is "Shattered." It skips its next 2 turns, its defense drops to zero, and all player attacks are guaranteed Critical Hits. This is the DPS phase.

## 6.3 Co-op & Elemental Synergy (Concerto System)

In a Server Raid (up to 4 players):

- **Elemental Reactions:** If Player 1 attacks with Glacio (Ice), the boss is inflicted with [Frostbite] . If Player 2 attacks next with Fusion (Fire), it consumes the Frostbite to trigger **[Melt]**, dealing 2.0x combined damage.
- **Concerto Tag-Out:** Instead of attacking, a player can click the [Tag Next] button. This passes their turn to the next player but grants that player a massive "Intro Skill" damage buff. Coordination in chat is vital.

# 7. Game Modes & Server Activities

## 7.1 Calamity Raids (World Bosses)

- **Trigger:** Once the server hits a daily interaction milestone (e.g., 500 total /hug s or /pat s), a Calamity Boss spawns in a designated channel.
- **Mechanic:** It has millions of HP. Anyone in the server can join the lobby. Combat runs in instance-threads. The users who deal the most damage or trigger the most Elemental Reactions get guaranteed Paradox Cores.

## 7.2 The /duel Arena (PvP)

- Players can wager standard currency and duel each other.
- Turns alternate. Mind games apply (e.g., using a defensive Glacio skill because you know your opponent has their Ultimate ready).

## 7.3 Dispatches (AFK Farming)

- Players can send their character on a 4, 8, or 12-hour dispatch.
- During this time, they cannot duel or raid, but they passively generate EXP and basic Echo upgrade materials.

## 8. The Economy (Material Index)

A summary of Cartethyia's currencies:

- **Credits:** Base currency. Used for basic shop purchases and forging fees. (Gained via chatting/interactions).
- **Lunakite:** Premium/Rare currency. Used to buy exclusive profile banners or summon rare pets.
- **Whisper Crystals:** Social currency. Used to buy gifts for bonded partners.
- **Tuning Modules:** Echo EXP items.
- **Sealing Tubes:** Unlocks Echo substats.
- **Forging Ores:** Levels up Weapons.
- **Paradox Cores:** Rerolls Echo substats. (Endgame currency).
- **Stasis Locks:** Locks a perfect substat during a reroll. (Extremely rare endgame currency).

## 9. UX & Aesthetic Presentation

Cartethyia must *look* expensive.

- **Dynamic Embed Colors:** If an interaction uses a blue-heavy GIF, the Discord embed's hex color automatically shifts to match it.
- **Canvas Generation ( /profile ):** The user profile is not a text embed. It is a generated, transparent PNG card showing their Avatar, their equipped Weapon, their World Level, their Top 3 Bonded Partners, and their equipped Main Echo.
- **Clean Menus:** Complete avoidance of text-wall menus. Everything utilizes Discord's `StringSelectMenu` and `ButtonBuilder` for fluid navigation (e.g., managing your Echo
